

② → Create a bot to open a substitute and search what you needed and upload the data on an excel sheet.

→ Step 1:- first of all we create a sequence.

→ Step 2:- We open browser and then type into what type of material we need.

→ step 3 → Then go to click option and point the cursor to search option.

→ Step 4 → Now, we go to data scrapping and a dialog box will appear, we fulfill the needs which the dialog box wants.

→ Step 5 → After clicking next, there is an option extra co related data in which max number of results by default = 100, we change it to 20.

→ Step 6-5 Then click on forward then on ~~multispace~~ again click on next and database of extract type is used.

⇒ Step 7 → We use write CSV to create excel file.

→ Step 8 → Also, use a message box to check the

Sequence \rightarrow

Output: 7

[illegible]
